

# Policy Central Enterprise

## Internet and computer monitoring for Schools

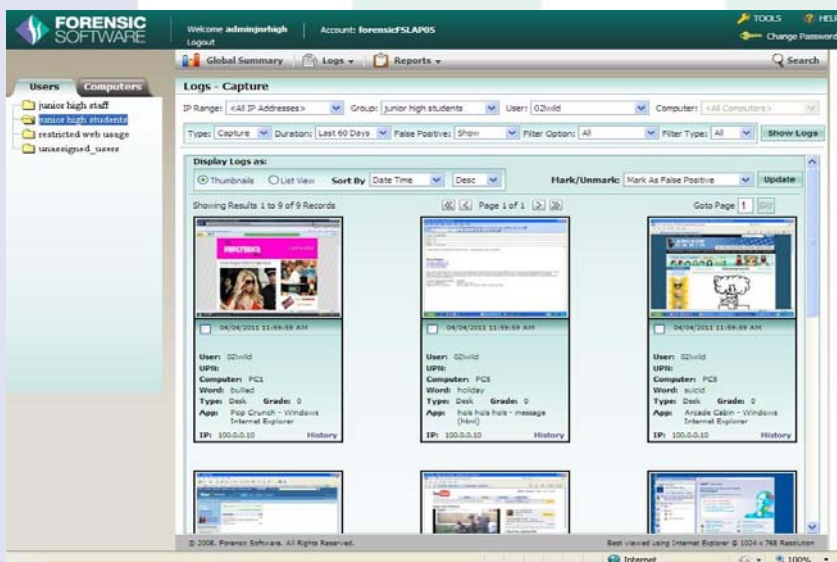

Policy Central Enterprise has been designed to offer comprehensive and automatic protection for everyone within your learning community. It helps enforce the Acceptable Use Policy and stops inappropriate behaviour, whether it involves "just looking" or active participation. It also balances the freedom to explore with measured safeguards.

Inappropriate behaviour can take many forms and is not limited to the websites a user may view on the internet. Policy Central detects misuse by monitoring users screens for inappropriate words and phrases. Where the software detects content associated with libraries such as 'Grooming' 'Pornography' 'Violence' and 'Profanity' the software will take a screen capture and the information is logged for a member of staff to look at.

### Customer testimonial

*"PCE has been deployed in our school for many years. This product is not just a web filter but also captures inappropriate words and can work well with other web filtering software. We use this product to also assist in controlling the actual use of programs such as IE. When students get too "playful" during class, we simply block that students use of the Internet. We have this software installed on ALL school owned laptops and PC's to cover us for possible liability issues as well".*
